

AUTOCAT+

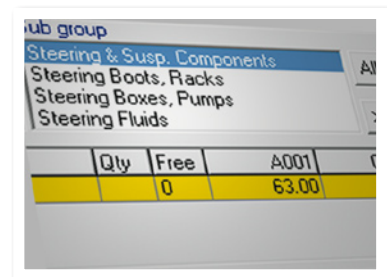

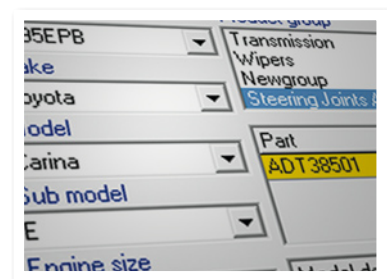

mamsoftware

Web-driven Electronic parts catalogue

Autocat+ is a web-driven electronic parts catalogue designed to quickly and accurately identify components for a given vehicle and application

- ▶ Extensive coverage
- ▶ Continually maintained database
- ▶ Simple selection and drill-down
- ▶ Product and supplier searches
- ▶ Product images and comparison
- ▶ Reverse search by part number
- ▶ Optional integrated VRM lookup
- ▶ Sophisticated notes management
- ▶ Vehicle and supplier preferences
- ▶ Intuitive single-screen interface

Autocat+ is an electronic parts catalogue that brings together automotive components from multiple suppliers in a consistent format, making it easier for motor factors and parts retailers to identify and compare products. In contrast to traditional electronic catalogues, Autocat+ employs Web Services technology to retrieve data from centrally hosted Internet servers. Using powerful software developed in-house, this data is continually maintained through an automated process of verification and standardisation. Consequently, Autocat+ users no longer have to wait for CD-based updates to gain access to new data.
