Autocat+ Version 7 Enhancements

Introduction

Autocat+ v7 is the next major release of MAM Software's popular electronic all-makes parts catalogue. Version 7 sees the introduction of the MAM Software Makes & Models Index (MMI), and includes significant improvements to the main user interface.

The MAM Software Makes & Models Index (MMI) is an extensive, proprietary database that improves the precision of part lookups. Integrated directly into Autocat+ v7, all supplier data that has been referenced to the MMI is highlighted, indicating the most accurate part/fitment match.

Several enhancements to the user interface improve ease of use, display more information and help to increase productivity. Revised colour indicators allow users to see at a glance which parts are a good match, and a shopping basket feature speeds up the process of selling parts.

Key Features

- ▶ New 'v7 compliant' data
- ▶ Superior make/model matching
- ▶ Increased lookup accuracy
- ▶ Fewer products returned
- ▶ New shopping basket
- ▶ Enhanced screen layout
- ▶ Improved main parts grid
- ▶ New grid menu & legend
- ▶ Expanded model details
- ▶ Part & supplier comparisons
