

Autocat+  
**v2.0**

# Easier identification Improved functionality

## New and improved parts catalogue

**FREE**  
upgrade  
for existing  
Autocat+ users

### New features for quicker and easier parts identification

*New developments in Autocat+ v2.0 streamline the selection process and help users make significant inroads towards attaining 'first-time-fit'*

#### Customisable product groups

With the introduction of customisable product- and sub-groups, users can now tailor Autocat+ to their own individual product profiles. Not only can groups be reordered and removed, new groups can be created and sub-groups assigned. This can significantly simplify the selection process, enabling products to be identified more quickly.

#### Enhanced image comparisons

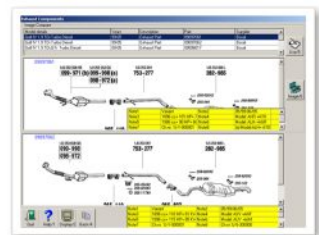

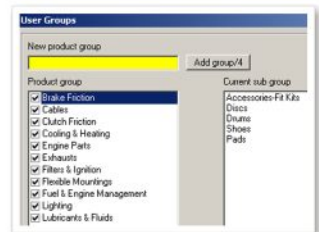

This latest version of Autocat+ continues to make significant steps towards 'first-time-fit' by improving upon its existing image comparison functionality. Users can now visually compare over 80,000 products – including exhausts – whilst also viewing notes provided by the supplier.

#### Improved supplier maintenance

Autocat's new supplier management routines make it even easier to specify first- and second-line suppliers for multiple product groups. Preferences can be automatically copied across an entire supplier's range quickly and simply. Furthermore, when products cannot be sourced from preferred suppliers, Autocat+ can now instantly suggest sources outside the favoured list.

#### Configurable parameters

A number of new user-defined parameters have been introduced in this latest release. For example, Autocat's useful notes facility, which enables valuable product information to be shared between catalogue users, now includes an option to print on invoices.

**COMING  
SOON**

#### Look out for forthcoming features planned for Autocat+ v2.1

- Engine code matching
- Links to fit times and service schedules
- Links to suppliers' online technical information bulletins
