

Autocat+
v5.0

Easier identification
Improved functionality

New and improved Parts catalogue

New features for quicker and easier parts identification

New developments in Autocat+ v5.0 streamline the selection process and help users make significant steps towards achieving 'first-time-fit'

Improved display

Autocat+ now runs at a screen resolution of 1152 x 864 pixels. Although it will still operate at lower resolutions, running at the increased size shows additional product information that can be used to filter and search for components.

Advanced matching

The scrutiny of additional data fields greatly helps to improve search precision, with closest matches shown in blue and VRM matches highlighted. VIN decoding (where available) and the search of supplier notes further improve accuracy.

Enhanced Usercat

Through UserCat, users can employ the existing MAM makes and models index (MMI) to create their own product references. These automatically appear colour-coded at the top of any search results for easy identification.

Extended searching

Data drill down has been further enhanced by allowing users to search all suppliers' extra information for all part lines in the grid. The mouse-driven search facility quickly identifies matching parts and highlights them in yellow on the grid.

New features in v5.0

- ▶ Screen resolution
- ▶ Usercat
- ▶ Data highlight
- ▶ Data manipulation
- ▶ VIN decode
- ▶ User groups
- ▶ Vehicle report
- ▶ Vehicle selection
- ▶ Supplier website
