Autocat+ VRM lookup

Accurate parts identification using registration data

Reduce the need to dual supply and increase first-time-fit by using vehicle registration numbers to identify component parts

- ▶ Reduce part identification errors
- ▶ Minimise dual supply
- ▶ Reduce restocking costs
- ▶ Speed up data entry
- ▶ Improve customer service
- ▶ Integrates with Autocat+
- ▶ Cleaned and enhanced data
- ▶ Additional data fields
- ▶ Extended field matching
- ▶ Automatic registration updates

Establishing and entering the correct vehicle information into Autocat+ can be a time consuming process that is often prone to error. As well as delaying despatch, this regularly requires the shipment of alternative items to ensure your customer receives the correct part for the job in hand. VRM lookup is a catalogue enhancement that enables vehicles to be identified using registration numbers. Not only does this speed up data entry, it also helps you increase the efficiency and accuracy of component identification.
