# High-performance software for the tyre industry

MAM Software is pleased to announce the release of a new 64-bit version of our popular Autopart v20 management solution. Already well respected throughout the automotive aftermarket for its performance and functionality, Autopart v20 is rapidly growing in popularity in the tyre market. This new solution will optimise all the benefits of this comprehensive business management tool while harnessing the full speed and power of the latest 64-bit processors and Microsoft's 2008 operating systems and SQL databases.

This latest release will deliver a number of performance benefits for tyre retailers and wholesalers. The 64-bit architecture can process more data and access more memory than 32-bit equivalents, making the application more responsive and ensuring complex procedures run smoother. The increased processing power of the 64-bit platform makes this version of Autopart ideal for fast-paced multi-user, multi-depot, live on-line environments.
